It's possible to embed all fonts, compress and subset them, set a user and owner password and manage user permissions by allowing or denying printing, document assembly, content copying, and

commenting, as well as generate a PDF/A file and edit metadata in regard to the PDF title, author, subject, keywords, creator, and producer. Settings can be reset to default. This will move the objects

from the currently selected view to the other window. At the same time, AnyView will try to determine a view that displays the objects in a way that is as close as possible to the original view. You

can also switch the view of the current window to the other window by using keyboard shortcuts. In order to keep the resulting images sharp and clear, you can use the histogram to view the
