WMV Merger is an application designed to help you merge video files of multiple formats (including ASF, FLV, AVI and WMV) and convert them to WMV or ASF. It can be easily used by novices. Offers decent video file support The tool comes with a standard interface in which you can import videos by using either the file browser or "drag and drop" method. In the list you can check out the name, transition and duration for each clip. Once you specify the output format, directory and filename, you can proceed with the encoding job. In terms of file support, the application lets you load anything under formats like MPEG, MPG, AVI, WMV, DAT, ASF, VOB, OGM, DIVX, and DIV. Specify output format and manage quality settings Furthermore, you can change audio and video settings when it comes to the resolution, frame rate, resize mode and bit rate. Options can be restored to their default values at any time. Unfortunately, your files can only be merged as WMV or ASF. On top of that, you can select the transition duration and effects (e.g. stripe, circle, heart), move items up and down in the list, remove an item from the queue or clear the entire thing, preview clips, and others. The video processing tool runs on a moderate amount of system resources, has a good response time, quickly finishes a task and generally delivers a fair image and sound quality. On the other hand, there is no help file available, the interface is outdated and WMV Merger failed a couple of conversion tasks during our testing. We recommend you look for something more advanced than this tool. Inquiryd, is there a way to merge videos in Avi format and convert the output file to WMV? It seems the only way I could find is to use Avi Editor which is not free. Is there a way to use AVM For Windows 7 or any other free solution? In the last couple of years, I have purchased a series of Digital video cameras and camcorders. I am looking for a software tool or site that will allow me to easily import all the files from my camcorder into 1 folder on my computer and then convert it to WMV. I want to do this for the purpose of putting the files on my computer so I can view them with Microsoft Internet Explorer. I would like to know of a application that I can install on my computer that will allow me to import and output multiple media files (video & audio) to AVI. I know this can be done with a simple free tool from Microsoft, but my budget for this project is very low. I have a server setup with php and I can access it and download files but I can not save the files
