Polymer Rheology is an easy to use, Java-based graphical tool for the analysis of rheological properties of amorphous polymers. The tool can analyse the rheological properties of a wide range of polymers and copolymers, both natural and synthetic, in the presence or absence of solvents and impurities. The tool includes an automatic sample preparation tool for sample preparation, sample sizing, and mixing of samples for analysis. The tool allows for analysis of storage and loss moduli and frequency dependent viscoelasticity. The tool also has a built-in solubility test allowing for the analysis of micelles in block copolymers.

Polymer Rheology Features: Free and open source tool Ability to process samples of any size in minutes Can use easily prepared samples for analysis Degrees of polymerization can be adjusted to fit any size **Polymer Rheology Technical Support:** Learn more about Polymer Rheology and technical support can be found at the GitHub project page and the Polymer Rheology User's Manual. I am new to python. i.e. `print l([1,2,3,4,5])` I have seen this piece of code in some tutorial videos. It gives me result as `[1,2,3,4,5]` I have no idea how to use it. Please anyone tell me how to use it. I have seen a lot of videos. A: You will want to look at `itertools`. It is often overlooked. It can make your life much easier if you understand the basic concept of it. Lets define a function that adds a list, and gives it a name. You will be using this function in the next example, and will be returning it, so this is the important part. Here are a few functions that work with lists, and can be used in combination with the `next(x for x in iterator)` function. `def add_list(list):`

Polymer Rheology is based on a small application named KEYMACRO. This is designed to be very easy to learn and use. With Keymacro you will be able to study the non-Newtonian behavior of polymer melts and aqueous solutions. Using this software allows you to analyze and study a broad spectrum of rheology problems. How to Install Polymer Rheology on Your Computer: Download the current version of Polymer Rheology (found here:), then install it using the file "installer" Open the "installer" file Choose "Extract to this location". This will copy the Polymer Rheology files to your computer Choose "Extract to "My Documents"", then press "Next" Choose "Extract to the program files folder" Press "Install" If you get a message saying "you are about to install to the Program Files folder, click "Okay". If you have problems installing Polymer Rheology, please review the "getting started" guide (found at the top of this page). This tool can be used for teaching and learning many topics in rheology, such as: The rheology of dilute polymer melts and solutions The rheology of concentrated polymer solutions Microrheology of polymer solutions The rheology of particulate suspensions The rheology of emulsions The rheology of gels The rheology of bioadhesives The manual will assist you with some of these topics. You can also find a "keymacro.pdf" manual, this can be used in conjunction with the "help" window in Polymer Rheology. Advanced Topic: Polymer Rheology includes the option to calculate the onset of critical buckling for your problem, and provides the value of the critical buckling force (or stress) using input from your equation. This is described more fully in the manual. Many people find that they can use simple Linear or Power Law formulations, however many others find this to be a difficult concept. In this case, you can use Polymer Rheology to study the rheology of non-Newtonian fluids, and obtain more realistic values. Using Polymer Rheology is very simple, 77a5ca646e

Polymer Rheology has also a lot of other interesting features: - import of your data from other programs - Simple and advanced simulation tools - many types of plots and graphs (line, bar, pie,...) - statistics tools - save your results as well as your data for future use - save and visualize your graphs as well as your plots - export your results in many different ways for your future reference - easy to use External links Category:Free science software Category:Rheology software Category:Rheology software for Linux Category:Java platform software Judge orders Florida inmate, convicted of burglary and trafficking to death chamber. The State of Florida must carry out an execution for James Coles, convicted in 1983 for a burglary and trafficking, by lethal injection, as ordered by a Judge. Judge Carter made the order Friday after Coles' attorneys argued that their client is mentally disabled. On Friday, the Florida Supreme Court ruled that the trial court had no jurisdiction to suspend or terminate Coles' death sentence. Under Florida law, a prisoner who has been convicted of a capital offense and sentenced to death cannot be committed to a mental hospital and the death sentence cannot be suspended or interrupted. Coles is on death row in Florida's Avon Park Correctional Institution. Jürgen Klopp insisted Liverpool have a "gift" of players who can fill the gaps left by the withdrawals of Coutinho and Fabinho, but that did not stop them missing the chance to start their title campaign with a victory over Manchester City on Sunday. The visitors' 19-year-old goalkeeper, Sergio Aguero, opened the scoring after just 10 minutes with a goal which drew a horror-movie scream from Klopp. It was the 100th goal of his managerial career, which included a short spell in the Bundesliga, the first of seven in the Premier League and one of 17 for Liverpool. "People can say: 'You have your problems,'" the Liverpool manager said, reflecting on their defensive issues in recent seasons. "But the next line they say is: 'You have a gift with players. You have a gift of players that can solve it.' "Then it's an injustice for me because, yes, you have your problems but we didn't use this last period to prove it. We did it just to prove it. That's enough for me. I have a club with people who want to do this and I have to pay them. That's what I'm paying them for. I can't spend more than I have." Klopp was disappointed to see a triple substitution in the opening stages, Alisson coming on for Loris Karius, Joe Gomez for the injured Dejan Lovren and Joel Matip for Joe Gksiora. "We had a few players who were injured today," he said, "and at least the same amount who were missing. It's not the same in the end. It's not the same if you play with 18 or 17 or 20. It's not the same because you don't give every player in the squad the opportunity to play. It is not the same. I just
