1. Field of the Invention The present invention relates to a technology for protecting a print product, and, in particular, to a method of protecting a print product by forming an image on a print product such as a postcard, a prepaid card, a gift certificate, and the like.

2. Description of the Related Art Today, a printed product, such as a postcard, a prepaid card, a gift certificate, and the like, is generally produced by a printer such as a large-scale printer that is provided in a plant or a company. These printed products are sold in a number of places. The products are often stolen at a sales point. In order to prevent a stolen printed product from being circulated, it is necessary to attach a seal or a signature on a surface of the printed product. It is impossible for a non-authorized person to perform such an attachment work. In order to overcome the problems in the above-mentioned conventional art, an object of the present invention is to provide a method of protecting a print product by forming an image on a print product such as a postcard, a prepaid card, a gift certificate, and the like, in which an image is formed on a surface of the print product in such a way that the image is difficult for an unauthorized person to recognize and the print product is likely to be lost. In order to achieve the above-mentioned and other objects, a method of protecting a print product according to the present invention comprises the steps of forming an image on a front surface and a back surface of a print product such as a postcard, a prepaid card, a gift certificate, and the like; and transferring the image to the front and back surfaces of the print product.

Cellular location and functional importance of the microtubule-associated protein MAP-2 in the developing brain. Microtubules and their associated proteins have an important role in the development and maintenance of the nervous system. During synaptogenesis, microtubules are reorganized into the complex network required for the formation of synaptic contacts. The microtubule-associated protein MAP-2 is a major component of the neuropil in the central nervous system. To investigate the function of MAP-2, transgenic mice expressing green

fluorescent protein (GFP)-tagged MAP-2 were generated and crossed with MAP-2-deficient mice. In contrast to a previous report (T
